[In Process - <Team Member Name>] - The named team member is working on this story

[Complete - <Team Member Name>] - The named team member finished this story

Admin

Phase One

As an admin, I can set a one-time password for a user who has forgotten their password. Using that one-time password, the user can log in to establish a new password. Once a user has logged in with the one-time password, it is cleared so it can't be used again. After setting a new password, the user must log in again. **[Complete - Krithik]**

As an admin, I can "delete" a user account so individuals who are no longer associated with the organization are unable to use the system. An admin is not allowed to remove that admin's access. (If an admin must be removed, some other admin must do it to ensure that at least one admin is available to do admin work.) When deleting an account, an "Are you sure?" message must be answered with "Yes" to remove access. **[Complete - Alan]**

As an admin, I can list all user accounts to help me perform my administrative functions. The list shows each account's username, the user's name, the user's email address, and the roles the user plays. **[Complete - Venus]**

As an admin, I can add or remove roles for each user. **[Complete - Caleb]**

Contributor

Phase Two

As a contributor, I can add new lessons learned to the system, specifying "core information". Once a lesson has been added to the system, I can see and manage it. Other roles may update or delete the information I have added. Other roles may lock one or more fields, so I am unable to alter them. They may delete the lessons learned I have added. I cannot see or alter any additional information those roles may add to the lessons. **[Backlog]**

As a contributor, I can see a list of all the lessons learned I have added to the system. I can use that list to specify which lesson learned to examine more closely. When I examine a lesson

more closely, I can see the fields I can alter, and which are locked and unavailable for me to edit. (When a lesson I created is locked or has a locked field, I am unable to delete that lesson.) **[Backlog]**

As a contributor, I can add experience information (e.g., time and effort data) to an existing lesson after a new attempt to leverage a lesson has occurred. This experience information provides what was done, how it was done, how long it took, and the effort used by the various team members. **[Backlog]**

As a contributor, I can only see the content I have added or the content that I have added after a curator has edited it. I am unable to see submissions from other contributors. **[Backlog]**

Phase Three

Epic: As a contributor producing and enhancing a lesson learned, I can use AI-based interactive writing, brainstorming, and searching tools to help me find good examples, include critical information, and express my thoughts well. **[Backlog]**

Viewer

Phase Three

As a lessons-learned viewer, I can see a list of all the lessons learned. **[Backlog]**

As a lessons-learned viewer, I can use a keyword search for lessons and receive a list of matches. **[Backlog]**

As a lessons-learned viewer, I can explore a specific lesson learned from a list of all of them or from a list returned from a search. **[Backlog]**

Curator

Phase Three

Epic: As a lessons-learned curator, I can use an AI tool to help build a list of search terms to help users find lessons where their search terms don't exactly match words in the paper. **[Backlog]**

Epic: As a lessons-learned curator, I can use an AI tool to help me edit and refine lessons-learned details so others can better understand the lesson. **[Backlog]**

Epic: As a lessons-learned curator, I can merge time and effort data from two or more lessons-learned instances into a statistically useful form to better support future uses of the lesson.

[Backlog]

Epic: As a lessons-learned curator, I can make the statistically useful time and effort information I add visible or not to the contributor. **[Backlog]**

Epic: As a lessons-learned curator, I can lock entire lessons or specific fields of a lesson so the contributor can't make changes to fields or delete the lesson. **[Backlog]**
