

Password Validation

- Created a JUnit 5 test file for 14 different test cases called PasswordValidatorTest.java
 - Null Input
 - Empty String
 - Valid Password
 - Minimum Valid Length (8 Characters)
 - Maximum Valid Length (58 Characters)
 - Length too long (59 Characters)
 - Length too short (7 Characters)
 - Missing Numeric Digit
 - Missing Lower Case Letter
 - Missing Upper Case Letter
 - Missing Special Character
 - Invalid Character
 - 4 Tests: Contains a Space, Contains tab, Contains Non-ASCII Symbol, Contains Emoji
 - Multiple Missing Criteria

DeleteUser

- Delete User button doesn't display on the role pages for non-admin roles.
- Clicking the Delete User button from the admin homepage leads to a unique page.
- Set up at least three users for testing purposes.
- The DeleteUser page displays the standard header and footer options, plus a dropdown to select a user similar to AddRemoveRoles, which defaults to a header option of "<Select a User>".
- Choosing the user's own name displays a label which says "You cannot delete yourself. Please select another user."
- Choosing any other name displays a label which says "Are you sure?" and a button which says "Yes".
- Clicking "Yes" deletes the currently selected user, removes that user's name from the dropdown, and resets the dropdown to the header option.
- After deletion, the header option, the user's own name, and the remaining user all display the correct UI configurations.
- The remaining user can also be deleted, showing that multiple deletions are possible.

AddRemoveRole

- "Select a user to be updated:" dropdown should display all users
- The selected user's roles should be displayed, and update immediately when changes are made
- "Select a role to be added:" dropdown should display all roles the selected user currently doesn't have
- "Select a role to be removed:" dropdown should display all roles the selected user currently does have
- Admin can give role1, role2, and admin roles to the selected user

- Admin can remove role1 or role2 from the selected user
- Admin can remove admin role from themselves if there are other admins in the database
- Admin cannot remove admin role from themselves if they are the only remaining admin
- Admin cannot remove admin role from other admin users
- User given a role can select to play this role upon logging in
- User cannot play a role that has been removed from them upon logging in
